New RX-P In-Ground Scissor Rack Introduced

***Ideal for vehicles
with minimum
ground
clearance...***

***...and configurable
for drive-through
service bays***

Hunter's new RX-P Scissor Lift Rack, an above-ground lift installed in a shallow pit, provides flush-to-the-ground runways with no ramps to climb or descend when entering or exiting. This feature all but eliminates ground clearance worries when servicing low-to-the-ground vehicles. A flush-mount RX configured for drive-through bays (shown above with DSP600 WMS Sensors) provides

even greater compatibility with vehicles equipped with low spoilers or air dams. The RX-P is a neat and efficient installation, excellent for "showcase" shops. It also saves valuable bay space. Both 9,000-lb. and 12,000-lb. capacity RX racks can be installed in the flush-mount configuration and equipped with any of the Hunter Air and Power Jack options available for these models.

AAA AutoMark Uses Hunter Inspection Lane Technology

AAA CAR CARE CENTER

AAA AutoMark Car Care Center technicians use Hunter Inspection Lane equipment to measure a vehicle's actual brake, suspension and sideslip performance as it exits the service area.

The American Automobile Association has installed a Hunter Inspection Lane in its newest Charlotte, North Carolina AutoMark Car Care Center. AAA Car Care Centers are full-service auto repair shops emphasizing quality and safety, with benefits for association members. The AAA Car Care Center Inspection Lane

includes a B400 Computerized Brake Tester, SA400 Suspension Analyzer and SS100 Sideslip Meter. AAA customers receive a complete undercar performance inspection in a drive-through sequence that takes less than three minutes.

First Production RKHD Christened in Salt Lake City

In a traditional Hunter ceremony, the first production unit of the new RKHD Heavy-Duty Power Rack was recently christened with aged bourbon at a new Sapp Brothers Truck Stops, Inc. location in Salt Lake City. Sapp Bros. is a long-time user of Hunter equipment at its multi-state truck service operations in the western U.S. The RKHD is designed to meet the widest range of heavy-duty shop needs. It can be installed as a free-standing lift with pop-up rear ramps or as a pit rack – Sapp Bros. chose the pit. It can also be extended to any wheelbase length by adding additional runway sections.

Hunter Supports Auto Dealers and National Automotive Technology Competition for Students

Hunter has teamed up with the Greater New York Automotive Dealers Association and like associations nationwide to help high school automotive technology students improve their skills through friendly competition. Regional winners travel to the National Automotive Technology Competition, held annually during the New York Auto Show, to compete for prizes and scholarships. At the 2003 competition, Ramona High School, in Ramona, California, was awarded a Hunter DSP9000 balancer for outstanding performance by its student team.

Hunter Helps Fleet Operator Reduce Operating Costs and Increase Profits

In a recent letter to the transportation industry, Walter Poole, Chairman of Evergreen Transportation, Inc., an Alabama-based fleet operator, described the success and cost savings his business experienced after purchasing Hunter heavy-duty alignment systems to service his fleet.

"In less than 10 months, our technicians have done over 400 tractor and trailer alignments. The results have been nothing short of remarkable."

The assistance of Hunter and Hunter Heavy Duty representative and Hunter Service Technicians has been excellent. Their assistance has been very beneficial to the success of our overall alignment program. We are very satisfied with the equipment and the support given by the Hunter staff.

If you need any additional information about our Hunter Total Alignment Program, please feel free to give us a call.

Sincerely,
EVERGREEN TRANSPORTATION, INC.
