RE: Hunter Testimonial

This year our company purchased a L441 four post lift, WinAlign premium alignment system, TCX 575 tire changer, and Road Force GSP9700 wheel balancer. We have quite a reputable history in the Atlanta market, but had never been involved with tires and alignment. This acquisition of the PROPER equipment is an integral part of a concerted effort to provide a more complete automotive service to our loyal customers. Overnight with the road force software and alignment system, we have become the go-to shop in our area for vibration concerns and problem alignments. Just as quickly, we are now doing tires and alignments daily without so much as a sign out front claiming our new services. The TCX 575 is an incredibly powerful machine, removing a 12-ply 19.5" tire from the rim with ease. This beast of a machine is a must if pursuing the medium-duty market. Before our purchase, I took a 19.5" combo to a neighboring shop to have the tire replaced, and after 30 minutes with TWO bleeding technicians, I was ready to roll!

Bottom line: Our revenues have increased accordingly with our expanded market thanks to Hunter Engineering Corporation (i.e.: \$20,000 to \$25,000 increased sales per month since purchasing the Hunter equipment in a down economy). This undoubtedly has been one of the absolute-best equipment purchases in the history of our company! We look forward to further Hunter purchases in the future, and would recommend their product to any professional.

Sincerely,

Brent Barber
