To Whom It May Concern:

I wanted to write you a note to inform you how happy we are with our new GSP9600HD vibration solving machine. Your commercial truck version of the RoadForce balancer is solving vibration problems for us, and making us the GO TO place to get rid of the 'shakes'.

Our first problem arose not too long after we got the new machine. We solved a vibration problem on a new tractor a local dealership had sent over to us. To do this, we processed all tire and wheel assemblies on the GSP, remounted them, checked the alignment (also Hunter), road tested the truck and solved the vibration problem the first time. The dealership was so pleased they sent over two more trucks for the same service.

Also, a local trucking company that runs gravel trucks came in with a bad vibration since new. On his steers, he is running '385' wide base tires. These are difficult tires to balance out and get right the first time. Once again we put his mounted assemblies on the GSP balancer. The owner said his truck had never driven so well. He followed that up by bringing in another set of trucks to be smoothed out later that week.

My GSP9600HD balance machine is solving problems for us and making my customers very happy. This new machine compliments our service business. Thank you for getting it right!

Sincerely,

Rob Hagenow
