

Good day Mr. Marketti,

Joliet Jr. College has decided to furnish our new 16-bay Automotive Center with equipment from Hunter Engineering Company. Our decision was based on quality, longevity, service, and training. After researching Hunter's competitors, we made the decision to equip our new facility with Hunter aligners, racks, tire changers, balancers, and brake lathes.

Based on input from our advisory committee and our automotive faculty, we determined that Hunter Equipment would be the most likely equipment used by our students after they graduate. By training our students on the same equipment they will be using in industry they will be better prepared for employment.

Our partnership with Hunter Engineering has proven to be an exceptional one. With the changes in today's automotive industry, partnerships between education and industry are necessary to keep training programs current. Hunter has been an outstanding industry partner.

Finally, Joliet Jr. College is a Certified NATEF Master Automotive Training Facility and recognized as one of the top automotive schools in the state. With the new up-to-date Hunter equipment, JJC can provide a state of the art facility for our students assuring JJC will continue to be one of the most sought after colleges for automotive technicians.

We are very pleased to be working with Hunter and are looking forward to a long successful partnership.

Sincerely,

Jim Coleman
Coordinator/Advisor
JJC Automotive Technology
